Overview

ABSTRACT

The Integrated Living Conditions Survey (ILCS) was first conducted in Armenia in 1996 followed by another round in 1998-1999. Thereafter, it has been conducted every year since 2001. The survey is carried out during the year with monthly shift (rotation) of households and communities. Findings of the survey are primarily used to estimate consumption-based poverty rates in the

country, as well as to provide valuable information on households' living conditions by means of other indicators.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Households

Scope

NOTES

The scope of the Integrated Living Conditions Survey includes:

- Housing Conditions
- Education
- Agriculture
- Health and Healthcare
- Social Assistance
- Current Expenditures
- Consumption
- Income

Sampling

Sampling Procedure

Sample design

Sampling frame: Population census

The sampling frame is updated: every year

Procedure used to update the sampling frame: No update till new Census

Lowest level of geographic disaggregation for which reliable estimates of the unemployment rate can be produced and their frequency: Settlement (annual)

The sample is stratified: Yes

Variables used for stratification: geographic region, urbanisation, population size of locality

Number of sampling stages: 2

Ultimate sampling units: households

Number of ultimate sampling units per sample area: 8

Sample size: 656 ultimate sampling units per month

Sample fraction: 1% of the total population

Comments: Before the beginning of the observation year the sample frame is constructed; every month the enumeration areas and households are rotated. Every interviewer visit 8 households per month.
