## Overview

---

### ABSTRACT

The IAS 2017 is a multi-thematic survey that enables in-depth analysis of the links between agriculture and the well-being of populations and therefore allows a better understanding of the behaviour of small-scale peasant agriculture. The survey is funded in part by USAID, which is also involved in several interventions aimed at improving the living conditions of rural populations in Mali. The objectives of the AES-I are to:

- obtain fundamental data from the rural sector
- provide detailed data on the cyclical characteristics of farms at decentralized levels
- obtain detailed information on the characteristics of the agricultural population and on the various factors of production (type and quantity of fertilizers, pesticides, seeds, irrigation, credit, etc.)
- provide information on the participation of women in agriculture
- obtain detailed information on the sources of household income

### KIND OF DATA

Sample survey data [ssd]

### UNITS OF ANALYSIS

Households

## Scope

---

### NOTES

The scope of this study includes the following:

- Characteristics of household members
- Education
- Health
- Housing characteristics
- Household assets
- Agriculture
- Fishing
- Livestock
- Workforce
- Employment (individuals aged 6 and over)

- Non-agricultural businesses
- Non-employment income
- Savings and credit
- Safety nets
- Food Safety
- Shocks and strategies
- Transfers

# Sampling

## Sampling Procedure

---

The sample is nationally representative and covers all regions and areas (urban and rural) except Kidal. In rural areas, the divisions considered were agricultural areas, agro-pastoral areas and pastoral areas. A total 51 sample strata were selected. 1070 enumeration areas were selected with probability proportional to size (PPS) using the 2009 population census.
