Overview

ABSTRACT

The objectives of the Integrated Agricultural Surveys i.e. Enquête Agricole de Conjoncture Intégrée (EAC-I) are to:

- Obtain fundamental data from the rural sector
- Provide detailed data on the cyclical characteristics of farms at decentralized levels
- Obtain detailed information on the characteristics of the agricultural population and on the various factors of production (type and quantity of fertilizers, pesticides, seeds, irrigation, credit, etc.)
- Provide information on the participation of women in agriculture.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Households

Scope

Sampling

Sampling Procedure

The Agricultural Integrated Survey is a sample survey. It differs from a census in that not all households / holdings are surveyed. It was carried out with a limited number of observation units (farms in rural areas, households in urban areas) selected from among the larger set of all units in the domain of interest in question. This limited the number of observation units constitutes the sample. It was determined in such a way that it was a reduced format of the studied population.

Questionnaires

Data Collection

Data Collection Dates

Start	End	Cycle
2014-07-01	2014-08-01	Pre-harvest
2014-10-01	2014-12-01	Post-harvest

Data Collection Mode

Face-to-face [f2f]

Data Processing

Data Editing

At the end of the interview, the interviewers were checking each questionnaire before leaving the household. There was a check of completeness of the questionnaire and for each questionnaire and the sections concerned. Small errors and minor offences were corrected by enumerators, but serious mistakes were corrected with the respondent.
