

Ministry of Agriculture, Lands, Forestry, Fisheries and Environment

Grenada Census of Agriculture 2012

May 2015

Document prepared in collaboration with the Food and Agriculture Organization (FAO) and the Central Statistics Office (CSO) of the Ministry of Finance and Energy

Forward

It gives me immense pleasure to share with you the output of the Fifth National Census on Agriculture conducted by the Ministry of Agriculture, Lands, Forestry, Fisheries and the Environment in collaboration with the Food and Agriculture Organization (FAO) and the Central Statistics Office (CSO) of the Ministry of Finance and Energy.

The National Census of Agriculture is one of the largest statistical operations conducted in Grenada. The first census on agriculture was conducted in 1961 and the Ministry has tried to give continuity to this very important activity by conducting subsequent censuses in 1975, 1981, 1995 and the most recently concluded 2012 Census of Agriculture.

Prior to conducting the 2012 Census on Agriculture, Grenada had not convened an agricultural Census in 17 years. The data derived from 1995 Agricultural Census was obsolete and needed updating. The FAO World Programme for the Census on Agriculture 2010 (WCA2010) recommends that Countries undertake agricultural census at least every ten (10) years. It was therefore in keeping with this guideline that 2012 Census on Agriculture was commissioned.

Data from an agriculture census play a critical role in the formulation, evaluation and monitoring of critical programmes within the sector. Furthermore, statistics from the 2012 census and indeed other censuses will play a critical role in the formulation of the National Agriculture Plan and the National Strategic Development Plan 2030. In addition, this publication will be an important source of information to subject matter specialists, planners, researchers, scholars, students, media and other interested parties.

The tremendous efforts made by the Ministry and its partners to release the data contained in this publication deserves much commendation especially given the difficulties encountered during the processes of data gathering and data entry.

I am obliged to express deepest gratitude on behalf of the Ministry of Agriculture, and by extension, the Government of Grenada, to the European Union (EU) who funded the implementation of the 2012 Agriculture Census. Likewise, I wish to express our profound appreciation to the Food and Agriculture Organization (FAO) for the critical role that it has played in the successful execution of the aforementioned Census.

The Central Statistics Office (CSO) was another important partner in the execution of the 2012 Census of Agriculture and the Ministry therefore wants to express sincerest appreciation and gratitude to this institution.

It is my sincerest hope that all important stakeholders of the agricultural sector would make very good use of the data contained in the census to make important decisions with respect to their specific endeavors.

Furthermore, I wish to express heartfelt thanks to Mrs. La Verne Mapp and the Census Coordinating team of the Ministry of Agriculture who demonstrated real commitment and perseverance to successfully complete the massive undertaking of all the activities associated with the 2012 Census of Agriculture.

May the information guide the planning process and inter sectorial initiatives for the coming years and I trust that the sector will continue to realize growth.

By the Hon. Minister of Agriculture Roland Bhola, June 05, 2015

CHAPTER 1 – Introduction

1.1 Background and Justification

Half a century ago Grenada conducted its first Census of Agriculture in the year 1961 using a sampling methodology. Since then three other Agriculture Censuses have been undertaken, in the years 1975, 1981 and in 1995. Fifteen years later more specifically in 2010 exactly six years after the devastating effect of the agriculture sector by Hurricane Ivan in September of 2004 and Hurricane Emily in 2005, the island began the process of preparing to undertake its fifth Census of Agriculture.

Since 1995 many structural changes have taken place in the sector more so, following the overall impact on the economy from the above mentioned hurricanes, which caused significant damage to the main export crops of nutmeg, cocoa and bananas. This immediately created a critical dent in the export earnings of the island. Apart from damages to crops and livestock, there was extensive destruction to the infrastructure of the sector making it even more difficult for the recovery process.

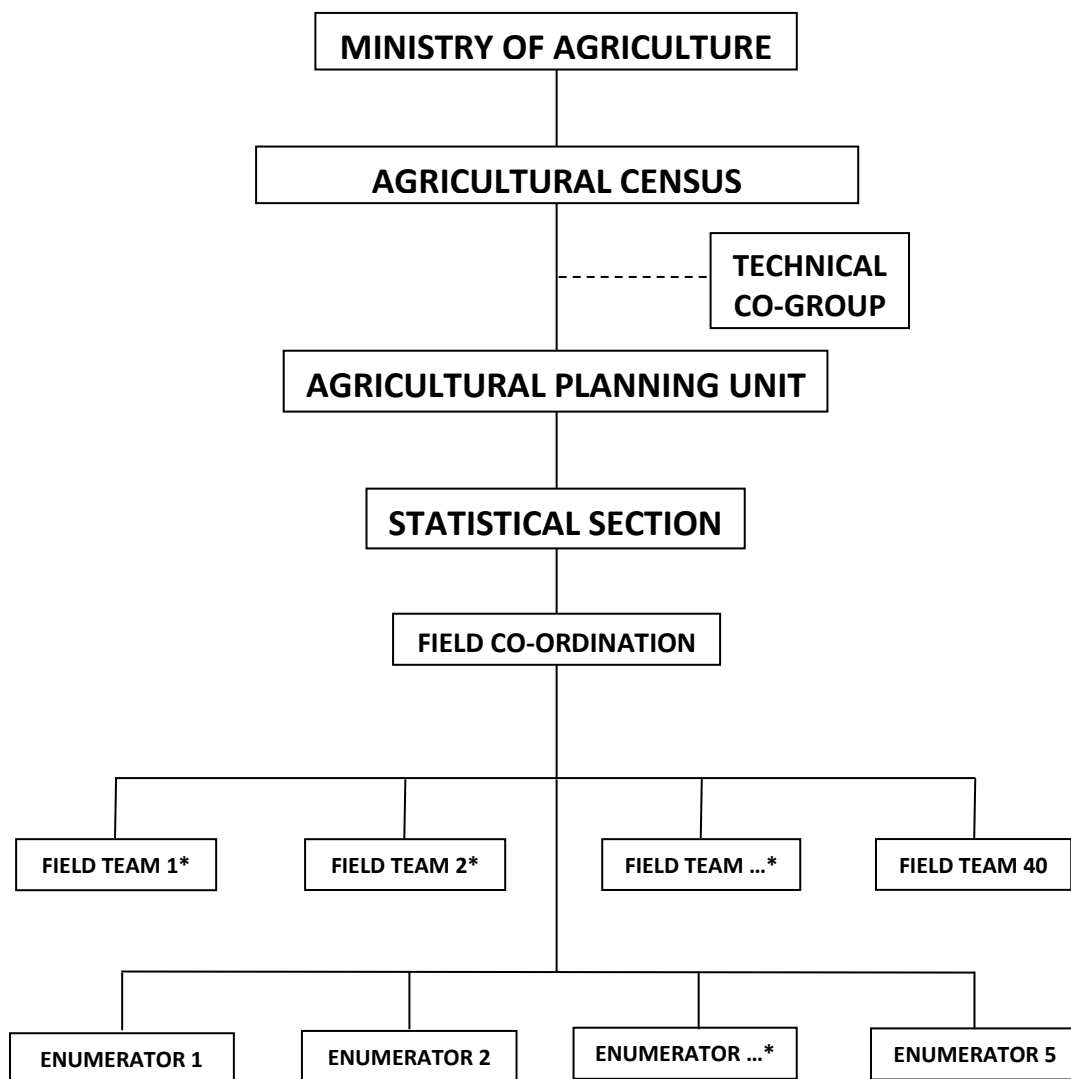

The main source of foreign exchange for the island comes from agriculture, and there is a great dependency on this sector. The information collected in the 1995 Census of Agriculture is now out dated and it is very important that updated and reliable information be made available to policy makers and planners in defining the way forward for agriculture. Particularly given the many internal challenges and the inability to cope with the external forces and pressures confronting small island states.

It is in this context that the Government of Grenada and the Grenadines instituted the plans to conduct the Census of Agriculture 2012, in order to have a more reliable understanding of the changes which have taken place over the last seventeen years and to obtain greater knowledge of the current status of the structure of agriculture, which will allow them to make the necessary adjustments to sector policies, project planning and their implementation to positively impact the Grenada economy.

1.2 Census Organization

The 2012 GAC had a hierarchical structure (below) which comprised all the required personnel for the successful execution of the census. This was approved by the Grenada Cabinet of Ministers thus giving the authority to conduct the census. According to this authority the Planning Unit within the Ministry of Agriculture was charged with conducting the 2012 GAC, with the collaboration and co-operation of the Central Statistics Office of the Ministry of Finance.

2012 GAC Organizational Chart

*- The ideal field team had ONE Supervisor and FIVE Enumerators.

An inter-institutional Agricultural Census Committee was organized to conduct the general promotion and co-ordination of activities for the 2012 GAC. This Committee was the central coordinating body and was chaired by the Permanent Secretary of MOA. It comprised representatives from producers and users of both the public and private sector institutions.

A Technical Co-group supervised and coordinated the technical, administrative and financial activities of 2012 GAC.

Coordination of the census activities was led by the Planning Unit of the MOA. Nine Parish Co-ordinators were recruited to supervise the field enumeration activities with a team of forty field supervisors and 190 enumerators.

The data processing activity was undertaken with the use of six persons who were used for the editing and coding of forms and questionnaires, eight persons were used for the data entry of the household forms and eleven persons for the entry of the household forms. These were all supervised by the census coordinator.

1.3 Objectives

The Grenada Census of Agriculture 2012 (GAC 2012) had three main objectives:

1. To measure the actual structure of the agricultural sector by collecting information on those variables which do not change rapidly from year to year.
2. To provide an adequate frame for the establishment of an ongoing Agricultural Information System to monitor and evaluate the changes occurring in this sector on a regular and continuing basis.
3. To strengthen the capabilities of the Planning Unit in the Ministry of Agriculture (MOA), and other related institutions, to plan, design, collect, process, analyse and disseminate information for the agricultural sector.

There were **specific objectives** outlined for the project as it relates to the collection of detailed data on the structural variables of agriculture, as follows:

1. Number and area of farm parcels by type of tenure;
2. Legal status of farms;
3. Land use area of farm parcels;
4. Sex, age and hours worked on farm by household members;
5. Education and main occupation of the farmer;
6. Farm labour;
7. Type of crops grown on farm parcels;
8. Number, type, sex and age of livestock;
9. Use of irrigation and agro-chemicals for crop production;

10. Use of farm machinery and equipment;
11. Proportion of farmers' income from agriculture;
12. Production and other issues

The collected data is expected to be used for:

- ◆ Overall analysis of the sector and where available comparison with previous censuses;
- ◆ Examine the contribution of both men and women to agricultural production - gender disaggregated statistics;
- ◆ A benchmark for current agricultural statistics and sampling frames for conducting periodic agricultural surveys;
- ◆ Baseline data for evaluation of impacts of agriculture and rural development programmes;
- ◆ Regional and international comparisons where possible.

1.4 Census Legislation

The 2012 GAC was guided by the Statistical Act of December 1960, which governs the operations of the National Statistical System in Grenada. For this particular census, approval was given by the Grenada Cabinet of Ministers, through a cabinet conclusion on a censal decree, to the Planning Unit of the Ministry of Agriculture to conduct the agricultural census in close collaboration with the CSO; and the power to conduct the census was given to a member of the Planning Unit, by the Director of Statistics, CSO.

This Census and Statistics Act also provides for total **CONFIDENTIALITY** of the information collected in the census. This information can only be used for the purpose of compiling statistics and no individual information can be disclosed to anyone outside the census organization.

1.5 Scope

The scope of this census included not only structural data; that is agriculture variables which do not change quickly over time such as size of farm, land use, land tenure etc. (FAO – WCA 2010) but those which change quickly over time such as short term crops planted and harvested, livestock on the farm etc. Following is a list of the variables for which data was captured in the GAC:

- I. Location of farm and farmer
- II. Legal status of farm
- III. Farmer and household member demographics
- IV. Farm employment – Paid and unpaid labour
- V. Number and area of farm parcels
- VI. Tenure of farm parcels
- VII. Area under land use

- VIII. Number of permanent trees planted
- IX. Number of farms growing temporary crops by area
- X. Use of irrigation on the farm by type
- XI. Number and type of livestock
- XII. Disposal of livestock by type
- XIII. Use of fertilizers and agro-chemicals:
 - Chemical fertilizers
 - Organic manure
 - Fungicides
 - Herbicides
 - Insecticides
 - Other pesticides
- XIV. Ownership and used of agricultural machinery and equipment
- XV. Miscellaneous Information
 - Markets for production
 - Farmer belonging to farm organizations
 - Receipt of technical assistance and information
 - Access to credit
 - Proportion of farmer's income from farm production
 - Keeping of farm records
- XVI. Issues of production

1.6 Coverage

The census covered the entire island of Grenada including the Grenadine islands of Carriacou and Petit Martinique.

In order to identify the existence of a farm(s) in a household, enumerators visited all households in the ED assigned to them for the enumeration. All households visited were screened with the use of a household questionnaire that contained specific questions pertaining to the involvement of household members in agricultural activities.

In order to be classified as a farm, a minimum level was required to be met by the household or institution. Once the screening process was completed and a farm was identified a farm questionnaire was then administered to the individual(s) qualifying as a farmer.

The qualifying minimum requirements for the 2012 GAC differed from that which was use in previous censuses. Those limits are listed below:

- One or more Cattle
- 5 or more sheep, goats or pigs combined
- Breeding of sheep, goats or pigs
- Owning 25 or more poultry/chicken

- 25 or more nutmeg, cocoa, bananas, fruit, nut and spice trees combined
- Growing of 0.25 acres or 10,000sq ft of garden crops
- Sales of agricultural and livestock products in the last 12 months amounting to more than \$2,500EC

Though the minimum limit allows for comparison with the other censuses taken, there will be some limitations in comparing some variables in the absence of the raw data of the previous censuses.

1.7 Time Reference

The reference year for this agriculture census was the 12 month period of October 2011 to September 2012. Some of the sector items were based on that 12 month period, others such as labour were reported for the period of the last week prior to the day of enumeration whilst others used the day of enumeration as the reference period.

1.8 Enumeration Period

The enumeration period commenced on 24th September 2012 and ended on 15th January 2013.

1.9 Type of Enumeration

The census was a complete enumeration exercise with visits to every household on the islands of Grenada, Carriacou and Petit Martinique. Visits to the households were directed with the use of ED maps. This allows for the collection of the census data at the smallest geographical level.

The islands were subdivided into a total of 264 EDs and 8 parishes, with 5 EDs excluded for this census. These were four in the parish of St. George which contains the greater part of the capital's commercial center, consisting mainly of business and financial buildings and one in the parish of St. Andrew.

As mentioned in section 1.6: coverage a household form was used to screen for the presence of farms in the household, and once this was found the farm questionnaire was completed.

1.10 Census Frame

The frame used in the 2012 GAC was obtained from a number of agencies including the CSO and the MOA. The list provided by the CSO was obtained from the 2011 Population and Housing Census from households and institutions who reported having some form of agricultural activity, in relation to the agriculture questions set out in the questionnaire.

The MOA provided a combined list generated from the registration of farmers by its extension area offices and from other farmer organizations together with a list of the large farms on the island.

1.11 Cartography

The Enumeration District maps used for the 2011 Population and Housing Census were the same ones used for the enumeration of the 2012 GAC and were provided by the CSO.

Each enumerator was furnished with a minimum of two types of ED maps to enable more precise location of boundaries whilst canvassing the ED. A combination of a hand drawn, a digitized, a topographic, or a satellite photograph was given.

1.12 Census Tabulation Classification

Tabulation of the 2012 GAC data was done at the Parish and National levels for all farm types and for the farm households. Apart from the classification of the main variables, each of the variables were also categorised by household types.

Both permanent and temporary crops were reclassified and detailed crops were aggregated to more comprehensive groupings.

The National level tabulation of the Farm questionnaire cross-tabulated variables by the categories:

- Size of Farm
- Legal Status of Farm
- Size of Farmer Household

Classification of main variables:

- | | |
|---|--|
| 1. Parish | <ul style="list-style-type: none">- St. George *- St. John- St. Mark- St. Patrick- St. Andrew- St. David- Carriacou- Petit Martinique |
| 2. Age Group of Household Members | <ul style="list-style-type: none">- Under 15 Years- 15 to 19 Years- 20 to 29 Years- 30 to 39 Years- 40 to 49 Years- 50 to 59 Years- 60 to 69 Years- 70 Years and over |
| 3. Sex of Household Members | <ul style="list-style-type: none">- Male- Female |
| 4. Size of Farmer Household | <ul style="list-style-type: none">- 1 Person- 2 to 3 Persons- 4 to 5 Persons- 6 to 10 Persons- 10 Persons and more |

- Freshwater Fishing

Other Activities for Sale

- Charcoal Production
- Production of Manure - Growing of Flowers
- Growing Pot Plants
- Engage in Agro-processing
- Nursery Plants for Sale
- Fish or Aquatic Products

CHAPTER 2 – Concepts and Definitions

The following are the main definitions for the key concepts used in the implementation of the 2012 GAC.

2.1 FARM

An "**ECONOMIC UNIT**" of agricultural production under single management comprising all livestock kept and all land used, wholly or partly, for agricultural production purposes, without regard to title, legal form, or size. Single management may be exercised by an individual or household, jointly by two or more individual or households, by a clan, village, or by a juridical person such as a company, co-operative or government agency. The farm land may consist of one or more parcels located in one or more **WATERSHEDS (WSs)**, providing the parcels share the same "**PRODUCTION MEANS**" utilized by the farm, such as labour, farm building, machinery or draught animals.

2.2 FARMER

He/she is a person or juridical institution who exercises management control over the agricultural farm operations and takes major decisions regarding resource use. The farmer has technical and economic responsibility for the farm and may undertake all responsibilities directly, or delegate responsibilities related to-day-to-day work management to a hired manager.

The work of a farmer can be material, when he conducts directly by himself the physical agricultural activities of the farm or only intellectual, like in the case of that farmer who lives in the city, and travels periodically to the farm, or not, but takes the major decision on the farm operation.

It is important to take into account the following considerations in the determination of a farmer:

- It always **MUST** be a one-to-one correspondence between a farmer and a farm.
- In rural areas, a one-to-one correspondence between a farm (farmer) and a household is quite common. Thus households serve to identify farms.

- In most of the cases the farmer is a person. But, in some households there can be more than one farmer, when each person operates different piece(s) of land. Then, each piece of land becomes a farm. However, if the agricultural operation and the production obtained in all those pieces of land is **COMMUNAL** for all members of the household, there will be only one farmer and only one farm to answer questions (farmer's name & address), 3, 4, 5 & 6 of Farm Questionnaire GAC-02. In this case, the farmer will be the household member, who spends more time in the farm (for example, in some cases the wife may spend more time); and if more than one person spends equal time, the farmer will be chosen according to these priorities: father, mother, eldest son and so forth. The other household members participating in the work of the farm will be regarded as members of the labour force of the farm.
- When two or more persons belonging to different households operate the same farm, each one will be considered as **JOINT FARMER**. However, the enumerator **MUST** decide with the informant who is going to be the farmer to answer questions 1, 2, 3, 4, 5, 6 & 7 of the Farm Questionnaire GAC-02. The member of the household who spends more time in the farm will be considered the farmer. If more than one member of the **JOINT** households spend equal time, the eldest will be the farmer.
- A farmer can operate land that is owned and/or leased and/or under any other form of land tenure.
- A farmer can operate land without any rights to agricultural use of the land.
- A hired manager or administrator will not be considered as the farmer of the farm he is managing. However, if he has livestock and poultry in the land of the farm, which he operates, then he will be considered as a farmer of a farm without land.
- When a manager, administrator or any worker of the farm, has received land for his own use, then he will be considered a farmer.
- When a person, who has two or more households, is operating land for agricultural purposes in the different households with the same "**PRODUCTION MEANS**" in different **WS**, he will be considered as one farmer and one farm.

2.3 Household

A household consists of one or more persons living together; i.e. sleeping most nights of a week with the household, and sharing at least one daily meal. In general, therefore, a household will comprise a father, mother and children living together. It is important to note, however, a member of the household is not necessarily a relative of the main family. For example, a boarder or a domestic servant, who sleeps in most nights of the week and shares at least one daily meal is also included as a member of the household. It is possible for a household to consist of just one person, or of more than one family; as long as they share living arrangements. A group of unrelated persons living together can also comprise a household.

2.4 Parcel

A farm parcel is any piece of land entirely surrounded by other land, water, road, forest, etc. not forming part of this farm. A parcel may consist of one or more plots adjacent to each other.

2.5 Land Use

The following represents the minimum classification for the Agriculture Census:

- Land under Permanent Crops - Land cultivated with long term crops which do not have to be replanted for several years. There are a few exceptions depending on the customs of the country such as the musa species, pineapple and horticultural crops which are temporary crops but are classified as permanent crops.
- Land under Temporary Crops - This includes all land used for crops with a growing cycle of less than one year.
- Fallow or Land Temporarily Fallow - is arable land at prolonged rest that is a period of one agricultural year before re-cultivation.
- Forest or Semi Forest - Land not classified as mainly agricultural land but has crown cover of more than 10 % of trees/forest trees able to reach a mature height of 5 meters or more. Shrub or bush cover of more than 10%.
- Pasture - Includes land used permanently (6 years or more) to grow herbaceous crops through cultivation or naturally for grazing.
- Non-Agricultural / Other Land / Abandoned Lands - Includes all other lands not reported above.

Land Use Classification - WCA 2010 (FAO)

I	II	III	IV
Agricultural Land	Cropland	Arable Land	Land Under Temporary Crops
			Land Under Temporary Meadows
			Land Temporarily Fallow
	Permanent Meadows and Pastures	Land Under Permanent Crops	
Forest or Other Wooded Land			
Other Land			

CHAPTER 3 – Main Structural Results and their Comparisons

3.1 Total Number and Area of Farms

The total number of farms recorded in the 2012 GAC decreased by 21% compared to the number recorded in the 1995 GAC; a decrease of 2, 526 farms from 11,871 to 9,345 farms. The parishes of St. George and St. Andrew saw decreases of 789 and 838 farms respectively. Of interest is the increase of 16% or 233 farms for the parish of St. David.

The overall area of farms also fell by 24% or 7,798 acres, from 31,177 acres in 1995 to 23,599 acres in 2012. The most affected parishes were St. Andrew with 2,397 acres and St. Mark with 2,094 acres.

Figure 1: Number and area of farms 1995 and 2012

Figure 2: Percentage Change in Land Area between 1995 and 2012 by Parish

** In 1995 the data for Carriacou and Petit Martinique was aggregated*

3.2 Number and Area (acres) of Farms by Size

The number of farms in every size classification has fallen (figure 3). The decline in number of farms ranges from 9% for farms of size 1.00 to 1.99 acres to 54% for farms 50 acres and over. This decrease is consistent with the reduction in both the number of farms and farming area.

Large farms 25 acres and over have experienced the largest decline in farm area - a decrease of almost 6,500 acres between 2012 and 1995. Almost 67% of the total decrease in land area comes from just 31 farms (those 25 acres and over).

Figure 3: Total number of farms by size 1995 and 2012

Table 1: Total Area (acres) and Percentage Change in Land by Size of Farm

Size of Farm (Acres)	1995	2012	% Change
	Area (acres)	Area (acres)	
0.001 - 0.49	789	662	-16%
0.50 - 0.99	1,316	1,104	-16%
1.00 - 1.99	2,395	2,158	-10%
2.00 - 4.99	5,401	4,732	-12%
5.00 - 9.99	5,031	4,292	-15%
10.00 - 24.99	4,706	4,161	-12%
25.00 - 49.99	2,188	1,274	-42%
50.00 - 99.99	9,352	5,195	-44%
Total	31,178	23,579	-24%

3.3 Number and Area (acres) of Parcels by Location

The number of land parcels was approximately 14,000, which is an average of 1.48 or 1 parcel per farm with land under agricultural production. The parish of St. Andrew had the highest number of parcels with 7,674 parcels whilst the smallest parish was Petit Martinique with only 25.

The average size of parcels nationally is about 1.70 acres. The parishes of St. Mark and St. John have larger average sizes at 3.90 and 3.11 acres respectively.

Table 2: Number and Area (acres) of Parcels by Location

Parish	No. of Parcels	Area of Parcels	%
St. George	2,079	2,451	15.1
St. John	1,163	3,616	8.4
St. Mark	392	1,529	2.8
St. Patrick	2,291	4,805	16.6
St. Andrew	4,865	7,674	35.2
St. David	2,442	2,972	17.7
Carriacou	519	507	3.8
Petit Martinique	62	25	0.4
Total	13,813	23,579	100

3.4 Land Tenure

The land tenure system between 1995 and 2012 has not changed. In both censuses the most prevalent land tenure was Owned as farmers have the desire to own the land that they produce on. However, the proportion of parcels owned has decreased between 1995 and 2012 from 67% to 58% with a corresponding increase in family land from 14% to 28% in 2012.

Figure 4: Comparison of Total Land Area by Type of Tenure

3.5 Legal Status of Farms

Most farms continue to have a legal status of where the farmer is an individual, though the number of farmers has fallen by almost 25% when compared to the 1995 period. The number of farms operated by co-operatives has declined to almost nil with only one being recorded and farms operated by government have also dropped significantly, by almost 42%. Only farms operated by Joint Farmers have increased, with this group increasing by 100%.

Table 3: Number and Percentage Change in Legal Status of Farms

Legal Status of the Farm	1995	2012	% Change
Individual	10,276	7,791	-24%
2 or More of Same Household	1,285	1,199	-7%
Joint Farmer	157	316	101%
Company	12	8	-33%
Cooperative	5	1	-80%
Government	31	18	-42%
Other	105	12	-88%
Total	11,871	9,345	-21%

Figure 5: Legal Status of Farms 1995 and 2012

3.6 Age and Sex of Farmers

The parish of St Andrew has the highest number of farmers, just over 3000 farmers, followed by the parish of St. George but with 43% fewer farmers than St. Andrew. Males, at over 70% of total farmer population, continue to dominate agricultural production.

The reported median age of male farmers has increased from 48 years in 1995 to 51 years in 2012 whilst that of the females has dropped by just 1 year, from 54 to 53 years between 1995 and 2012.

Figure 6: Age of farmers by sex 2012

3.7 Permanent Crops Grown in Pure Stand

Some of the crops grown in pure stand have increased slightly both in terms of the number of farms reporting and the area. It is important to note that there has been an increase in the area of cocoa by well over 800 acres and of bananas by almost 560 acres. The aforementioned crops were significant contributors to the island export earnings. These increases were as a result of a number of government interventions taken after Hurricanes Ivan and Emily in 2004 and 2005 respectively.

Nutmeg which is another of the island's most important crops, providing significant earnings from exports. This crop however, has not been as successful in increasing area under production but rather has declined. Nevertheless, the number of farms has increased by approximately 28%. Plantain on the other hand experienced the reverse with a decline in farms.

Table 4: Number and Area of Farms Growing Permanent Crops in Pure Stand

Crops Grown	1995		2012	
	No. of Farms	Area (acres)	No. of Farms	Area (acres)
Cocoa	880	1,144	1,142	1,992
Nutmeg	502	1,330	693	1,184
Mango	253	162	94	94
Citrus	228	160	129	75
Coconut	515	375	82	58
Banana	1,622	652	2,940	1,210
Plantain	160	47	141	57
Sugar Cane	232	248	101	63

3.8 Use of Fertilizers and Agro-Chemicals

There has been a general decline in the number of farms using chemical fertilizers and agro-chemicals such as fungicides, herbicides, insecticides and other pesticides. There is clearly a direction of the farming community towards greater use of inorganic manure. As more resources become available less use will be made of the agro-chemicals.

Figure 7: Farms reporting use of agro-chemicals

3.9 Ownership of Agricultural Machinery and Equipment

The number owning machinery and equipment has increased, particularly for smaller types of equipment. There has also been a dramatic increase in the number of motor vehicles owned by farmers for use in their agricultural production (table 5).

Of note is the reduction in the number of knapsack sprayers reported, which can be related to the reduction in the use of agro-chemicals.

Table 5: Farms Owning Machinery and Equipment by Type Livestock by Type and Number

Machinery/ Equipment	1995	2012
Motor Vehicles	191	511
Tractors	16	23
Pumps	30	5
Chain Saws	73	500
Brush Cutters	112	1,260
Knapsack Sprayers	737	661
Mist Blowers	22	54
Seed Planters	4	28

3.10 Livestock

The total number of cattle, sheep, pigs and chicken recorded in 2012 fell by 55%, 17% 13% and 6% respectively while goats and rabbits increased by 81% and 25% respectively. The average number of livestock reported on farm has declined.

Although there has been decrease in the total number of livestock and farms with livestock, the average number per farm remained more stable (chart 8).

Table 6: Farms Reporting Livestock by Type and Number

Livestock	1995		2012	
	No of Farms	No of Livestock	No of Farms	No of Livestock
Cattle	1,750	4,368	673	1,973
Sheep	3,299	13,052	2,173	10,912
Goats	1,896	7,004	2,445	12,736
Pigs	1,090	5,338	575	4,638
Rabbits	696	3,982	518	5,013
Chicken	3,641	81,688	1,213	77,388

Figure 8: Average Number of Livestock per farm

3.11 Income from Farm

The majority of the farms, particularly the small farms have a low percentage of income from their farm. Of these 38% receive no income from their farm and 22% receive less than 25%.

Figure 9: Income received from farm

CHAPTER 4 – Statistical Findings

A - Household Summaries

Table A1 - Number of Responses by Households, Interview Status and by Parish

Parish	Interview Status					Total
	Done	Call Back	Vacant	Refusal	Not at Home

HOUSEHOLD QUESTIONNAIRE – GAC-01B

CONFIDENTIAL

SECTION I

1. PARISH

2. VILLAGE

3. Enumeration District

4. Watershed

5. Household Number

6. No. of Persons in Household

7. Name of Respondent

8. Location of Household

9. Telephone Number

10. Enumerator Number

11. Supervisor Number

12. Interview Status: ☐ Done ☐ Call Back ☐ Vacant ☐ Refusal ☐ Not Home

SECTION II DOES ANY MEMBER OF THE HOUSEHOLD:

	Yes	No	How many		Yes	No
1. Own Cattle	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	1 or more	<input type="checkbox"/> 1	<input type="checkbox"/> 2
2. Own Sheep	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>			
3. Own Goats	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>			
4. Own Pigs	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>			
5. TOTAL (Sheep + Goats + Pigs)			<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	5 or more	<input type="checkbox"/> 1	<input type="checkbox"/> 2
6. BREED (Sheep/Goats/Pigs)				Breeding	<input type="checkbox"/> 1	<input type="checkbox"/> 2
7. Own Poultry-Chickens	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	25 or more	<input type="checkbox"/> 1	<input type="checkbox"/> 2
8. Have any Nutmeg Trees	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>			
9. Have any Cocoa Trees	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>			
10. Have any Bananas species	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>			
11. Have any Other Fruit/Nut/ Spice Trees	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>			
12. TOTAL (Nutmeg + Cocoa + Banana + Fruit + Nut + Spice Trees)			<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	25 or more	<input type="checkbox"/> 1	<input type="checkbox"/> 2
13. Grow any Garden Crops (Vegetables, root crops, Melon, Passion fruit, pineapple, etc)	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<div style="display: flex; align-items: center;"> <div style="margin-right: 5px;">Area (Acres)</div> <div style="display: flex; gap: 5px;"> XXX•DDD </div> </div> <div style="display: flex; align-items: center;"> <div style="margin-right: 5px;">Area(Sq ft)</div> <div style="display: flex; gap: 5px;"> <input type="checkbox"/><input type="checkbox"/><input type="checkbox"/><input type="checkbox"/><input type="checkbox"/><input type="checkbox"/><input type="checkbox"/><input type="checkbox"/><input type="checkbox"/><input type="checkbox"/> </div> </div>		<input type="checkbox"/> 1	<input type="checkbox"/> 2
				≥ 0.250		
				≥ 10,000	<input type="checkbox"/> 1	<input type="checkbox"/> 2
14. Value of sales of Agricultural and Livestock Products in the last 12 Months			No Sales <input type="checkbox"/> 1	Less than \$2,500 <input type="checkbox"/> 2	\$2,500 or more <input type="checkbox"/> 3	
15. Classify this farm:	Non Farm <input type="checkbox"/> 1	Farm under cut-off <input type="checkbox"/> 2	Farm in GAC-02 <input type="checkbox"/> 3	If 3, Go to Section IV		
16. If classification is 'Non-farm' or 'Farm under cut-off' what is the household's main employment or source of income?						Code <input type="checkbox"/> <input type="checkbox"/>

SECTION III - ADDITIONAL LIVESTOCK AND CROP INFORMATION: (For Non-Farm and Farms under the cut-off)

A.		Yes	No	How many		Yes	No	How many
Own Horses		<input type="text" value="1"/>	<input type="text" value="2"/>	<input type="text"/>		<input type="text" value="1"/>	<input type="text" value="2"/>	<input type="text"/>
Own Rabbits		<input type="text" value="1"/>	<input type="text" value="2"/>	<input type="text"/>	Own Donkeys / Mules	<input type="text" value="1"/>	<input type="text" value="2"/>	<input type="text"/>
					Own Bees	<input type="text" value="1"/>	<input type="text" value="2"/>	Hives <input type="text"/>

B. OTHER FRUIT, NUTS & SPICE TREES: (Farms Under Cut-off)

	Number		Number		Number
Avocado	<input type="text"/>	Coconut	<input type="text"/>	W. I. Cherry	<input type="text"/>
Breadfruit	<input type="text"/>	Golden Apple	<input type="text"/>	Sapodilla	<input type="text"/>
Citrus	<input type="text"/>	Guava	<input type="text"/>	Soursop	<input type="text"/>
Clove	<input type="text"/>	Mango	<input type="text"/>	Other trees	<input type="text"/>

C. Temporary Crops Grown in LAST 12 MONTHS (number of plants): (Farms under cut-off)

	Number		Number		Number
Beans	<input type="text"/>	Cucumber	<input type="text"/>	Pigeon peas	<input type="text"/>
Cabbage	<input type="text"/>	Eggplant	<input type="text"/>	Tomato	<input type="text"/>
Carrots	<input type="text"/>	Herbs	<input type="text"/>	Watermelon	<input type="text"/>
Corn	<input type="text"/>	Lettuce	<input type="text"/>	Other vegetables	<input type="text"/>

D. Root crops grown in LAST 12 MONTHS (number of plants): (Farms under cut-off)

	Number		Number		Number
Cassava	<input type="text"/>	Eddoes	<input type="text"/>	Yam	<input type="text"/>
Dasheen	<input type="text"/>	Sweet Potato	<input type="text"/>	Tannia	<input type="text"/>
				Other root Crops	<input type="text"/>

E. Household Member responsible for Agricultural Activities AGE: SEX : M F

SECTION IV - OTHER HOUSEHOLD ACTIVITIES For ALL HOUSEHOLDS

	Yes	No		Yes	No
1. Produce charcoal for sale?	<input type="text" value="1"/>	<input type="text" value="2"/>	2. Produce Manure for sale?	<input type="text" value="1"/>	<input type="text" value="2"/>
3. Do you practise any Agro-Forestry?	<input type="text" value="1"/>	<input type="text" value="2"/>	If YES, Please state number of trees		
			Mahogany	White Cedar	Red Cedar
			<input type="text"/>	<input type="text"/>	<input type="text"/>
			Blue Mahoe	<input type="text"/>	<input type="text"/>
4. Engage in any Fishing Activity			Sell any fish or aquatic products? Yes <input type="text"/> No <input type="text"/>		
TYPES OF FISHING:			What is the Average number of times you go Fishing Per Month <input type="text"/>		
Spear fishing	<input type="text" value="1"/>	<input type="text" value="2"/>			
Fishing from rocks/shore	<input type="text" value="1"/>	<input type="text" value="2"/>			
Fishing from boat	<input type="text" value="1"/>	<input type="text" value="2"/>			
Gathering whelks/cockles, etc	<input type="text" value="1"/>	<input type="text" value="2"/>			
Freshwater fishing	<input type="text" value="1"/>	<input type="text" value="2"/>			
5. Engage in growing flowers for sale?	<input type="text" value="1"/>	<input type="text" value="2"/>			
6. Engage in growing pot plants for sale?	<input type="text" value="1"/>	<input type="text" value="2"/>			
7. Engage in Agro-processing for sale?	<input type="text" value="1"/>	<input type="text" value="2"/>			
8. Engage in nursery plants for sale?	<input type="text" value="1"/>	<input type="text" value="2"/>

End of Interview

Glossary of Terms

A.

Agricultural Census - is a statistical operation for collecting, processing and disseminating data on the structure of agriculture, covering the whole or a significant part of the country. Structural data collected in a census of agriculture are size of holding, land tenure, land use, crop area harvested, irrigation, livestock numbers, labour and other agricultural inputs. In an agricultural census, data are collected directly from agricultural holdings, but some community-level data may also be collected. A census of agriculture normally involves collecting key structural data by complete enumeration of all agricultural holdings, in combination with more detailed structural data using sampling methods.

It is the complete enumeration of all the farms existing in Grenada on the census day without omission or duplication.

Agricultural Census Frame - It is the complete list of all EDS prepared in Grenada for the 2012 GAC.

Agro-Chemicals - Refers to chemicals used in farming. These include HERBICIDES (weed killers), INSECTICIDES (insect killers), FUNGICIDES (controlling fungus), HORMONES (fruit initiating), etc.

B.

Building - It is a physical structure which is separate and independent of any other structure. It MUST be covered by a roof and enclosed within external walls. A building may be a factory, shop, detached dwelling, apartment building, warehouse, repair shop, poultry pen, etc. NOTE that detached rooms relating to main buildings are treated as part of the main buildings, for example detached kitchens, toilets, servants quarters, garages, etc.

C.

Census Day (today) - It is the day (today) the agricultural census enumerator is effectively conducting the total interview with the farmer.

Census Year - It is the calendar year from 1 October, 2011 to 30 September, 2012.

Closed Dwelling Unit - It is a dwelling unit which is occupied, but during the enumeration period, the occupants are temporarily away, that is away for less than six (6) months.

D.

Dwelling Unit - It is any building or separate and independent part of building in which a person or a group of persons is living at the time of the census enumeration. It MUST have direct access from the street or road or common landing, staircase, passage or gallery where occupants can enter or leave without passing through anybody else's living quarters.

E.

Enumeration District - It is an area containing around 100 households on average with clear, stable, physical boundaries with their description in words. The boundaries of EDS have been delineated on sketch maps scale around 1:10,000 and/or topographic maps scale 1:25,000.

F.

Fallow One Year And Less - It is the land lying fallow where a crop was harvested during last season (from January, 2012 to census day), that has been prepared or being prepared (ploughed for example), which will be put under crops soon afterwards.

It could be another land use, like pastures or bush, under that land prepared or being prepared, to be put under crops during next season.

Fallow More Than One Year - This is a land at prolonged rest from more than one year to three years before re-cultivation. This land could be used for grazing purposes.

Land remaining fallow for more than three years may acquire characteristics requiring it to be reclassified, such as "PASTURES" (if used for grazing) or "FOREST" (if overgrown with trees that could be used for timber, firewood, etc.), or "NON-AGRICULTURAL LAND" (if it becomes wasteland).

Land fallow one year and less or fallow from one to three years, should be distinguished from land abandoned; the former is part of the farm whereas the latter is not.

Fertilizers - Refer to anything added to the soil to increase the amount of plant nutrient available for plant growth.

H.

Heavy Use - Chemicals or fertilizers are used 12 or more times for the year

I.

Informant - The informant is the person from whom the data is collected about the farm. Normally it is the farmer. But sometimes, it could be a qualified person who knows very well the information being collected, such as the manager, the administrator, competent worker or an old farmer's relative.

Inorganic Fertilizers - Also known as chemical fertilizers are classed into three main types: **STRAIGHT FERTILIZERS** (nitrogenous, phosphatic, potassic); **MIXED FERTILIZERS** (mixture of two or more STRAIGHTS); **COMPOUNDS** containing two or more of the STRAIGHTS that are manufactured by a chemical reaction.

Interplanted Crops - Interplanted crops are crops planted between rows of another crop (examples: beans between corn rows; cocoa between rows of coconuts). Interplanted crops may be temporal or permanent crops (but not temporary and permanent crops).

Yields of some mixed and interplanted crops may be as large as when grown alone, and even when favourable interactions, in the case of special mixtures, may result in increased yields.

Irrigation - It is the cultural practice of wetting or moistening the farm soil by mean of artificial canals or watercourses to improve the yields of the crops.

L.

Land in the Farm not elsewhere specified - This includes land occupied by buildings, parks and ornamental gardens, roads or lakes, irrigation canals, open spaces needed for storing equipment and products, wasteland, land under water, mangroves, dasheen swamps, and any other land not reported under previous classes.

Legal Status of Farm:

1. **Company** - when the farm is operated by juridical persons. Joint stock companies, constitute typical examples of this category.
2. **Co-operatives** - include several kinds of organizations in which the principles of individual, joint ownership, or leasehold, are combined to various degrees.
3. **Household** - where two or more members of the same household (for example husband & wife, father & son, etc.) **COMMUNALLY** operate the same farm (see numeral 3.12.3). It is possible that a household member who jointly operates such a farm may also be the farmer of another farm operated by himself alone.
4. **Individual** - where the farm is operated by one person. There may also be more than one farmer in a given household, each operating a separate farm.
5. **Joint Farmer** - when two or more individuals of different households jointly operate a farm (see numeral.
6. **Other** - these are private farmers not specified in any of the classes mentioned above. Examples are clans, private schools and religious institutions.

Light Use - Chemicals or fertilizers are used once or 1 to 5 for the year.

Livestock - refers to all animals kept or reared in captivity on the farm, for agricultural purposes. The 2012 GAC will include cattle, sheep, goats, pigs, horses, donkeys, rabbits, bees and poultry

Livestock Population - The livestock population refers to numbers of animals present on the farm today, regardless of ownership.

M.

Medium Use - Chemicals or fertilizers are used once or 6 to 11 times for the year.

Mixed Crops - Mixed crops are two or more different temporary or permanent crops (but not temporal and permanent crops) grown simultaneously in the same plot. The number, kind and proportions of crops in the mixture will generally vary according to prevailing practices or other factors, such as meteorological conditions.

Temporary crops, particularly grains, are grown and harvested as mixtures sometimes. Individual crops in the mixture should be specified and the most important constituent crop or crops named. Mixed cereal grain crops, other mixed grain crops and mixed grasses grown for hay are examples.

N.

Natural Forest - This includes natural woodlots or timber tracts, constituting part of the farm which have or will have value as wood, timber, other forest products or for protection. Row, belts, and small clumps of natural trees, bamboo and other woody natural vegetation should be included in natural forest. Natural woodland or natural forest used only for recreation purposes should be excluded and reported under the farm as "NON-AGRICULTURAL LAND".

Non-Agricultural Land - This includes all other land of the farm, not elsewhere specified, whether or not potentially productive.

It covers two land classes:

- Unused and undeveloped land potentially productive for agriculture or forestry, but not yet developed.
- Land in the farm not elsewhere specified.

O.

Organic Manure - Are the fertilizers produced from plant and animal by-products. The term organic fertilizers include: **FARMYARD MANURE, ABATTOIR RESIDUES, COMPOST** (plant remains), **GREEN MANURE** and **SEAWEED**.

P.

Pastures (Cultivated and Not) - These include land used permanently (for one year or more) to grow herbaceous forage crops, through cultivation or naturally for mowing or grazing (wild prairie or grazing land). Permanent pastures on which trees and shrubs are grown should be recorded under this heading only if the growing of forage crops is the most important use of that area. Do not include temporary forages if harvesting destroys the plant; include them under temporary crops.

Permanent Crops - These include land cultivated with long-term crops which do not have to be replanted for several years after each harvest (sugar cane, coconut, cocoa, citrus, etc.); land under trees and shrubs producing flowers, such are roses and jasmine; and nurseries (except those for forest trees, which should be classified under "PLANTED FOREST").

A Nursery is a piece of land where young plants are cultivated for transplanting and/or sale.

Do not forget to include in this category the asparagus, strawberries, pineapples, vanilla, passion fruit, bananas.

Be very careful to include in this category the permanent crops 'ASSOCIATED' with temporary crops (for example coconuts interplanted with cocoa and associated with cassava, and 'yams'); sugar cane associated with beans. Also include coconuts mixed with pastures for grazing purposes.

Exclude the permanent pastures and meadows.

Planted Forest - This includes planted woodlots or timber tracts, constituting part of the farm which have or will have value as wood, timber, other forest products or for protection. Rows, belts, small clumps of planted trees, bamboo and other woody planted vegetation should be included in planted forest. Planted woodland or planted forest used only for recreation purposes should be excluded and reported under the farm as "NON-AGRICULTURAL LAND".

Private Dwelling - It is a dwelling in which a private household resides. This may be a single house, flat, apartment, outroom, part of a commercial building, or a boarding house catering for less than six persons.

Pure Stand - This is a single crop cultivated alone in a plot. A pure stand crop may be either temporary or permanent.

R.

Reporting Unit - It is the individual unit or element that belongs to the total universe or population defined for the 2012 GAC for the data collection (reporting) purposes. The "**FARM**" is the reporting unit for the 2012 GAC. One census questionnaire MUST be filled out for EACH farm.

S.

Scale - It is the ratio of a distance on a map to its corresponding distance on the ground. Scale may be expressed as a ratio (1:25,000), a representative fraction (1/20,000), or an equivalence (1 cm on the map = 250 meters on the ground).

Sketch - It is the representation, without regarding the scale, of the main natural and artificial features, themes or subjects.

T.

Temporary Crops and Forages - These include all land in the open air used for crops with an under-one-year growing cycle, which must be newly sown or planted for further production after harvest. Crops remaining in the plot more than one year should also be considered temporary crops if harvesting destroys the plant (for example cassava).

Crops grown in rotation and destroyed when the land is ploughed should be considered as temporary crops. The forages are considered temporary crops when the plant is destroyed after harvest.

Include in this category as special cases dasheen, yams and tannias, even if sometimes two harvests are obtained before replanting the same or a different crop. Do not include in this category dasheen growing in swamps; include it in "NON-AGRICULTURAL LAND". Vegetables, flowers, bulbs, and kitchen and market gardens, should also be included in this category.

Land under trees and shrubs producing flowers, such as roses and jasmine, should not be included in land under temporary crops.

Do not include in this category asparagus, strawberries, pineapples, vanilla, passion fruit, bananas, sugar cane and similar crops, since in this 2012 GAC they **MUST** be considered as permanent crops.

Topographic Map - It is a reduced (for example 100 times) and simplified representation of the "NATURAL AND ARTIFICIAL FEATURES" of the terrain such as hills, rivers, creeks, forests, swamps, etc. and towns, villages, roads, path roads, bridges, canals, power lines, etc. Each topographic map has a "LEGEND" of symbols representing these features of the terrain. One important symbol is called the "CONTOUR LINES" representing the elevations or inequalities (relief) of the land surface.

U.

Universe or Population of 2012 GAC - It is composed of all farms (reporting units) existing in Grenada on the census day.

Unused and Undeveloped Potentially Productive Land - This includes uncultivated land, comprising part of the farm but not included under the preceding headings, producing some kind of utilizable vegetable product, such as reeds or rushes for matting and bedding for livestock, wild berries, plants and fruits (bread trees), or land that could be brought into crop production with little more effort in addition to that required in common cultivation practices.

V.

Vacant Dwelling Unit - If a dwelling unit is habitable but no one is leaving there at the time of your enumeration, you **MUST** also visit on the days after census day so that you can interview anyone who may have moved in since your previous visit.

W.

Watershed - A physical area (basin) or structure down which water flows through a system of streams, creeks, ravines, etc. draining the excess water into a main river going to the sea. The boundaries of the WSs are usually the hill or mountain ridges. An ED may be divided into different pieces by the WS boundaries.
