### Formula applied for estimation methods

Estimation: unbiased Horvitz-Thompson estimator corrected for non-response and for no longer existing farms

The weight  $w_{ih}$  joined to farm (unit)  $i$  in in stratum  $h$ :

$$w_{ih} = \frac{\text{total number of units in stratum } h}{\text{number of selected units in stratum } h} \times \frac{\text{number of selected units in stratum } h}{\text{number of units in stratum } h \text{ responded to survey}} =$$

design weight x non - response weight
