#### ABSTRACT

The FAO has developed a monitoring system in 26 food crisis countries to better understand the impacts of various shocks on agricultural livelihoods, food security and local value chains. The Monitoring System consists of primary data collected from households on a periodic basis (more or less every four months, depending on seasonality). The FAO launched a household survey in Pakistan in July 2021 which resumed in August 2021. This Round 2 survey took place in 25 districts across three provinces. The random sample of 4,625 rural households was representative at the admin 2 (district) level. Face-to-face interviews were carried out.
