Nepal	NPL

STUDY TYPE

Agricultural Survey [ag/oth]

SERIES INFORMATION

This is the first ever survey of this type conducted in the country.

ABSTRACT

The Nepal Fishery survey 2015 is an adhoc survey conducted by the Central Bureau of Statistics, Nepal in 2015. This was conducted for the first time in Nepal. The survey was designed with the following objectives: 1. To identify the district-wise number of fish ponds, area of reservoirs, fish production and thier cost estimation. 2. Estimate the contribution made by the fishing business to the economy. 3. Providing necessary fishery statistics for planning and policy making.

Sampling

SAMPLING PROCEDURE

Most important initiation of the survey was preparing a survey frame. A total of 24,559 fish ponds were collected in 2014/15. The enumerators of the SOs were directly involved for the listing purpose using paper listing form. Theoretically, the listing of the farms was based on primary source of data collection. The listing forms collected from districts were edited and coded and finally, the survey frame was prepared. After preparing the survey frame, the list was prepared on the basis of area of fish ponds in descending order. The samples were drawn according to systematic sampling.

RESPONSE RATE

There was no non-response case as additional samples were drawn to address the non response as well as missing cases.
